The Apple Mac book is a very likeable series of notebooks, especially the MA897LL A... The Ma897ll a laptops are very desirable they enjoy a first rate keyboard and as Apple manufacturer all the hardware and more importantly the operating system, the user experience is greatly enhanced. The Apple Mac Pro series of laptops is comprehensive but uncomplicated when compared to other leading manufacturers. But it is still possible to end up with the wrong model for your needs. Hopefully this guide will help in your selection.

There are three distinct ranges from Apple The Macbook, Macbook Pro And Macbook Air. Not all models will suit your needs as each model is designed for different requirements.

Lets first look at the Macbook. I regard this to be the entry-level, general use notebook. I don't mean that in a poor way. Anyone interested in general business apps, Internet, basically anything that's not too graphics intensive will enjoy using this notebook. get decent performance from this laptop

The Macbook on the other hand has a bit more power, is solidly built with a 13.3" screen it makes a decent compromise between power and price. It is reasonably portable although at 5 pounds a bit heavy. If you want a reasonably fast and reliable laptop this will do the job, However if you want some real fire power with top notch graphics then it has to be the Macbook Pro and the MA897LL a is the pick of the bunch.

Why would you want to pay a good deal more for the Mac Pro MA897LL A? It's a far larger footprint. The answer is the fantastic GPU. If you require a truly powerful graphics processor then the MA897LL A is the one for you. High end video editing, 3-d gaming and 3-d modelling a top of the range CPU is an essential and the MA897LL A delivers in spades. The Nvidia graphics are simply superb and work well with most graphically oriented applications. If you want to do things like high-end video editing, 3-d modelling, and 3-d gaming, a decent GPU is a must and Apple delivers well with the Macbook Pro. Currently, the Macbook Pro comes with the Nvidia 8600GT. This is a good mid-range GPU and should work well with most graphically oriented applications.

Why buy the Macbook Pro 897LL A? Could it be the beautiful case, from solid aluminium? The very practical LED backlit keyboard or the multi-touch trackpad? Or possibly the way it all works beautifully?

So what type of person will enjoy the Macbook Pro ma897ll a? If you like using applications that are graphically demanding get the ma897ll a. Now we mean those of you who are serious about high-end video editing, working in 3-D or those who simply like the latest games which require top notch graphics. If you like the performance of a desktop computer but need or desire a notebook then the brilliant display and superb performance of the ma897ll a, will suit you down to the ground.

Let's round out this discussion with the Macbook Air. This particular notebook is severely limited. It has the slowest processor, you can't upgrade the memory, you get a tiny amount of storage, no ethernet jack, and no built-in optical drive. Despite all these imperfections, this is the perfect notebook for the right person, but an MA897LL-A it is definitely not.

So there you have it. I did the research tried a few models down at the Apple store and went for the MA897LL A. I can honestly say it is the best money I ever spent on technology. Best of luck with your Mac.

Now you know a little about the Apple MacBook MA897LL A Notebook, check out a full review here MA897LL A. The very best prices and customer service on the Apple MacBook Pro MA897LL A are here Apple MacBook Pro MA897LL A 17-inch Laptop
